

# CERTIFIED VR7 TOYOTA LAND CRUISER 300

International Armored Group is the FIRST company in the world to have tested and successfully certified the all new Toyota Land Cruiser 300 series. The IAG certified VR7 TLC 300 has been tested under the latest VPAM standards for vehicle ballistic and blast resistance. This certification is a testament to IAG's prowess and engineering know-how in the manufacturing of armored vehicles and solidifies IAG's position as an industry leader and pioneer. Others may follow but there could only be one who was first.

The completely redesigned armored Toyota Land Cruiser 300 is available with all new diesel and petrol engines mounted on 7-speed or 10-speed automatic transmissions. The smaller all new V6 turbo-diesel engine, replacing the Toyota Land Cruiser 200 Series' 4.5-litre V8 turbo-diesel engine, offers more power and torque from less capacity: 227kW and 700Nm, surpassing the Toyota V8's 200kW and 650Nm.

The vehicle is designed with VPAM BRV VR7 Edition 3 protection level, ensuring high security for passengers. It offers multiple engine options, including a 3.5L V6 Twin Turbo Petrol producing 409hp and 650Nm of torque, a 4.0L V6 Petrol with 271hp and 385Nm of torque, and a 3.3L V6 Twin Turbo Diesel delivering 302hp and 700Nm of torque.

The vehicle is available with either a 6-speed automatic or 10-speed automatic transmission, providing a smooth driving experience. With a spacious interior that accommodates up to 7 passengers, it is an ideal choice for families or teams requiring both ample space and a high level of protection and comfort.
